

Riley Hopkins

About us: When Riley Hopkins built the first four color printing press in the early 70's at his San Francisco shop...it started a revolution in the screen printing industry. Over 35 years, and 20,000 plus machines later, Riley Hopkins and his staff are still designing and manufacturing the best manual printers you can buy, period.

Riley Hopkins Screen Printing Machinery LLC is the manufacturing entity for the design, production and assembly of all our equipment and accessories.

Please review this brochure, and visit our website at www.rileyhopkins.com to see the latest and greatest equipment. Check out our Lowrider Conveyor Dryer, and our Air/Red autoflash cures.

Joystick Registration

Joystick Registration is a brand new way to register jobs! The system is very easy to use, allowing you greater speed to make major moves, while having terrific control over tight adjustments. Here's how it works; Tighten the screen in the screen clamp, and adjust the screen to lay flat on the platen. Next, loosen the two Reggie knobs to let the screen float freely on the platen. Grab the outer end of the screen with your left hand, and place the heel of your right hand on the Reggie knobs. Use your thumb and index finger to move the Joystick knob. Your hands naturally follow each other, so throughout the entire registration process, you always have your eyes on the image! Its simple, fast, accurate, and just what you need to win the registration race! *Remember...if you're into Micro's we also make very precise Micro's too!*
